- DJANGO
- SQL
- Flutter
- mongodb
- React

PROJECT

1.AI-POWERED CODE EDITOR

- Built a hybrid AI-powered code editor with File Explorer, Folder Management, Drag & Drop, Tabs System, Terminal Panel, Monaco Editor integration, AI Chat Assistant, Auto Apply AI Code, Live Code Diff, Selected Code Replace, Save + Auto Save, Theme Switching, and Settings System.

2.LOCAL SERVICE FINDER APPLICATION

- Developed a real-time service marketplace platform where users can find, connect, and communicate with service providers through call, WhatsApp, ratings, and location-based features.
- Built a full-stack web application with user authentication, Google login integration, dynamic service listings, and responsive UI/UX for seamless user experience.
- Implemented live backend APIs, database integration, role-based users (Service Partner & Client), and scalable architecture for real-world service management.

3.STUDENT MANAGEMENT SYSTEM

- Developed a Student Management System to manage student records efficiently.
- Implemented CRUD operations (Add, View, Update, Delete) for student data with database integration.
- Designed a user-friendly and responsive interface to simplify student information management.

4.ONLINE EXAM MANAGEMENT SYSTEM

- Developed an Online Exam Management System to conduct and manage online examinations.
- Implemented features for exam creation, student participation, and result evaluation with database integration.
- Designed a user-friendly and responsive interface to ensure smooth exam experience for users.

5.To-Do List With Small Games

- DESIGNED AND DEVELOPED A CLIENT-SIDE TO-DO LIST APPLICATION WITH PROFILE MANAGEMENT.
- IMPLEMENTED TASK CREATION, EDITING, DELETION, AND COMPLETION TRACKING TO HELP USERS ORGANIZE DAILY ACTIVITIES EFFICIENTLY.

6.Ticket Management System

- Designed and developed a Form Validation application using Frontend HTML, CSS, and JavaScript and Backend PHP and Mysql to ensure accurate and secure user input.
- Applied JavaScript DOM manipulation and event handling to dynamically show or hide validation messages without page reloads.
